

We do not live on what we eat, but on the nutrients that our cells can actually absorb.

The ultra-finely ground Sango sea coral as well as the use of crystalline-structured UMH water guarantee the transport of nutrients to the inside of the cells.

Elixir of Life – Sango Sea Coral

On the seabed off the coasts of the island of Okinawa, embedded in millions of years old, fossil seabed, finds the so-called "treasure of the island of centenarians", the Sango sea coral.

Apparently, the intake of the corals obtained from these corals is Minerals and trace elements are jointly responsible for: that the inhabitants of Okinawa live on average longer than elsewhere on our planet.

The main reason for the longevity of the islanders, many see in the contained coral calcium.

Available from:

Sango Meereskoralle

Highly effective natural combination of vital substances, in a ratio that can be perfectly used by the body. New, 500% finer grinding.

Optimal cellular dietary supplement for the daily supply of our organism with ionized minerals and trace elements.

Important functions of ionized minerals and Trace elements in the human body

We have 81 stable elements on our earth. More than 70 of them are located in the Okinawa Sangokoralle in a perfect proportion for us humans.

Due to their small size of only 8µm, these more than 70 ionized minerals and trace elements of the new Sango sea coral easily penetrate our cell membranes and thus reach their destination - the inside of our cells - in a targeted manner.

Once there, they are involved in countless metabolic processes as well as in the detoxification of our organism and promote the absorption of oxygen in our cells.

With the help of then euen finest grinding, our body's own Completely replenish calcium stores and mineral deposits. These reserves are needed to make body fluids alkaline and thus prevent hyperacidity.

Effect

Replenishment of leached mineral deposits in our cells and tissue fluids.

Permanent acid balancing and stabilization of the pH, by regeneration of demineralized cells.

Antioxidant, bactericidal and fungicidal growth.

Important building block for the effective elimination of free radicals.

Activation of all enzyme systems transmitted by minerals (magnesium controls about 300 enzyme systems).

Proven storage of calcium in bone tissue within a few weeks.

The finely ground Sango powder allows the absorption of minerals via the oral mucosa, even if there are absorption problems in the intestine.

Sustainable degradation of millions of years old sangocorals from Okinawa (no overexploitation). 100% natural, without any Additives! Tested quality, free of radioactivity.

Taking:

3x daily 1 level scoop of powder = 1g (with at least 1 to 2 glasses of energized water)

The exceptionally vitality pendening and beneficial Effect of this fountain of youth is on the following natural Vital substances due to:

Over 70 minerals and vital trace elements in highly effective ionized form (potassium, sodium, zinc, phosphorus, selenium, manganese, chromium, vanadium, germanium, strontium, sulfur, copper, cobalt, iodine, etc.)

The decisive factor here is the biological and cell physiological ideal ratio of calcium to magnesium (2 : 1)
